

Flexible Manufacturing Lab (FMS)

Mission

Research and develop learning methods that engage students and in flexible manufacturing systems and related areas of engineering and technology, in order to potentiate the professional and working skills of its members, that bring positive changes in the productive sector at regional, national and international levels.

Vision

Provide services to the industry related to the simulation of production processes that generate a direct relationship with the business world by providing appropriate solutions. Establish networks with other institutions of higher education, in the form of remote laboratories, strengthening research in strategic areas and of common interest.
