

Mobile Logistics Laboratory

Mission

The Logistics Laboratory of the Faculty of Industrial Engineering provides a space for the academic exploration of new concepts that are at the forefront of logistics management. It allows students to see the different elements of technology used in inventory management within the supply chain while strengthening their skills.

Vision

Become a laboratory with sufficient infrastructure to provide the academic community the strengths needed to face the work environment through the management of technology tools designed to manage logistics. It will also be a center for providing support and advice to the corporations in the community.
